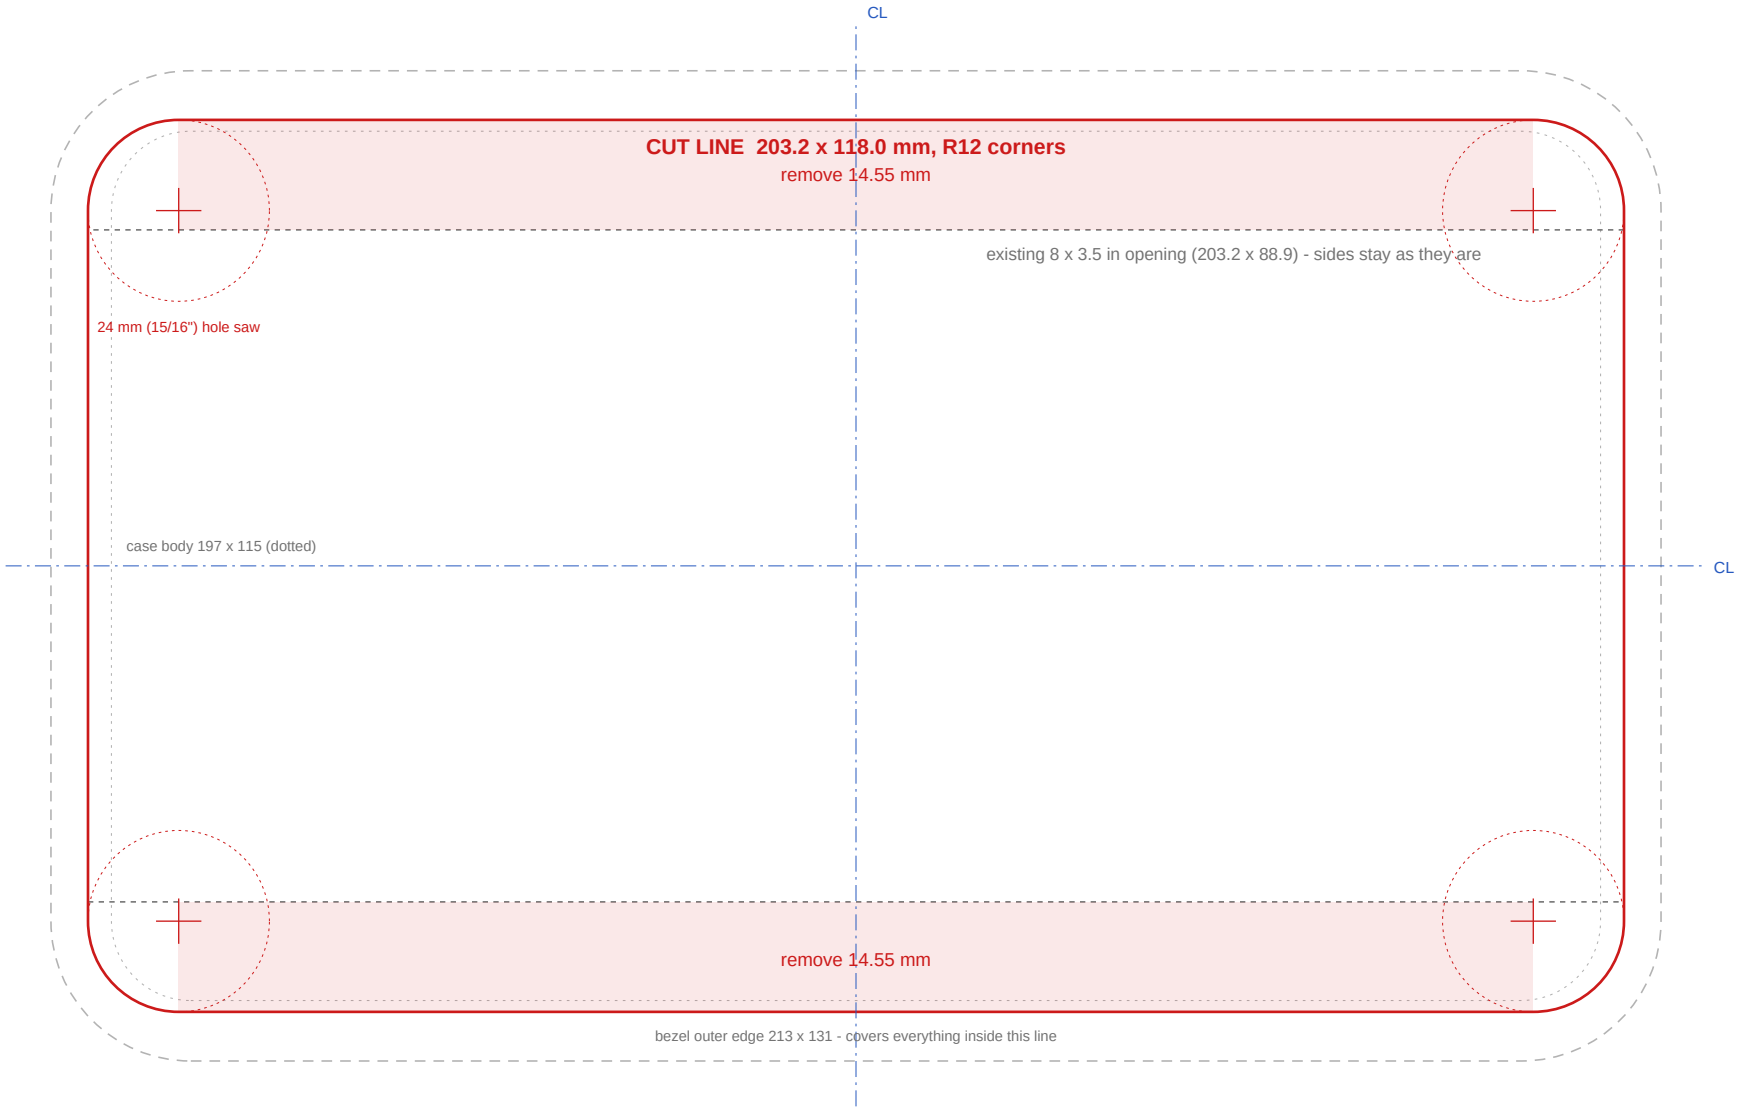
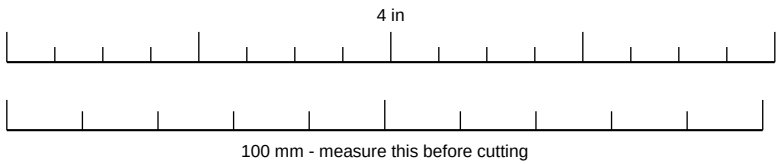
Scout 80 dash - Waveshare 7" cut-out template

PRINT AT 100% / ACTUAL SIZE (no 'fit to page'). Check both scale bars before cutting.

1 Tape the template to the dash face. Line up the grey dashed box with the existing opening edges.
2 Centre-punch the four + marks and cut the corners with a 24 mm (15/16") hole saw.
3 Cut straight between the holes along the red line, top and bottom only. File to the line and deburr.
4 Test-fit the case: it should slide in with ~3 mm side play and ~1.5 mm top/bottom; the bezel hides the gap.





Assumes the new opening is centred vertically on the existing one. Shift the template if you want it elsewhere.
